ZIYANG LING

Phone: +86 180 5608 1485
Email: zanelling@mail.ustc.edu.cn
Target Role: Research Intern

EDUCATION

University of Science and Technology of China
M.S. Student
Sep 2024 - Present
Hefei, Anhui, China

Central China Normal University
Bachelor's Degree
Sep 2015 - Jun 2019
Wuhan, Hubei, China

RESEARCH INTERESTS

- Natural Language Processing
- Multi-Agent Systems
- Large Language Model Reasoning
- Knowledge Graph Construction

SKILLS

- GRE: 325+
- TOEFL: 100+
- CET-4 / CET-6
- Python
- C / C++
- Java
- SQL
- AI Agents
- Retrieval-Augmented Generation
- Vibe Coding

PROFILE

Master's student at the University of Science and Technology of China with a first-author paper accepted at ACL 2026. My research focuses on natural language processing, multi-agent systems, and biomedical reasoning. I have experience driving research projects from system implementation through experimental evaluation and academic writing, and I am seeking a research internship to contribute to frontier projects in a rigorous, collaborative environment.

RESEARCH EXPERIENCE & PUBLICATIONS

THOR: A Theta-Gamma Hierarchical Oscillatory Reasoning Framework for Multi-hop QA Mar 2026
ACL 2026 Main Conference (Accepted) | First Author
- Developed a brain-inspired oscillatory reasoning framework to mitigate attention decay and error accumulation in multi-hop question answering.

PRISMATIC: Prescription Risk Inspection System for Multi-Agent Treatment Interaction in Clinical Decision-Making Sep 2026
EMNLP 2026 (Under Review) | First Author
- Designed a multi-agent prescription review system to improve medication accuracy and reduce drug-drug interaction risks.

BioMedReason: Heterogeneous Knowledge Embedding Biomedical Reasoning Framework Sep 2026
EMNLP 2026 (Under Review) | First Author
- Integrated heterogeneous biomedical knowledge embeddings into large language models to strengthen domain-specific multi-hop reasoning.

BioMARS: A Multi-Agent Robotic System for Autonomous Biological Experiments Sep 2026
Nature 2026 (Under Review)
- Applied multi-agent control to autonomous biological experimentation and iterative optimization.

Resource-efficient Instruction Tuning of Large Language Models for Biomedical Named Entity Recognition Dec 2025
Journal of Biomedical Informatics, 2025

Training-Free BioNEL-RAG: Advancing Biomedical Entity Linking through Retrieval-Augmented Generation and Large Language Models Dec 2025
ICHCI 2026 (Accepted)

PROJECT EXPERIENCE

Organoid Chat Jan 2025 - Mar 2026
University of Science and Technology of China
- Interactive organoid data exploration, literature retrieval, analysis, and intelligent question answering.
- Full-stack development, model-based QA, RAG, and knowledge graph integration.

AD Screening System Sep 2024 - Dec 2024
University of Science and Technology of China & The First Affiliated Hospital of USTC
- Developed an AI-assisted screening system for Alzheimer's disease.
- Implemented the full-stack platform and AI-based screening analytics.
